

Remodels and additions, done right the first time.

Kitchens, baths, additions, drywall and paint — one

A website built to book jobs — not just to look good.

Every element exists to turn a visitor into a phone call — and to show the work, not just talk about it. The planet in the header is rendered live in the browser: no stock video, no plugins, nothing to load.

BUILT TO CONVERT

- **Tap-to-call bar** pinned to the bottom of every phone screen
- **Estimate form** that captures project type, timeline and budget before the first visit
- **Job photos in the header**, so the work shows before a word is read

BUILT TO BE FOUND

- **Structured data** for Google — contractor profile plus FAQ rich results
- Real text content, **not an image of a website**
- Fast and mobile-first — what local search actually rewards

BUILT TO LAST

- **One self-contained file.** No page builder, no plugins, no subscription
- Nothing to update, nothing to break, no renewal that doubles
- You own it outright

WHY IT WINS WORK

01 It answers objections before the call

A seven-question FAQ and a four-step process section handle what actually stalls a remodel decision: cost, timeline, mess and surprises.

02 It proves the work

Real project scope — beams, waterproofing, roof tie-ins — plus a cutaway of a shower wall and a drag-to-compare slider.

03 It gets remembered

Named after the largest planet in the solar system — so the site opens on one. Nobody else in this market looks like this.

CONCEPTS READY

WHAT WE NEED FROM YOU TO GO LIVE

- 1 **Your phone number and the towns you serve.** The service area is the single biggest local-search lever on the site.
- 2 **8–12 photos of finished jobs.** Phone photos are fine. This is the highest-impact change on the whole page.
- 3 **Your license number**, if you would like it displayed, plus a business address for the Google listing.

Two directions, your choice

The same content and the same conversion tools, in two looks. Pick one, or mix them.
